Chemistry & Physics Living-Learning Community

Program Overview
The Chemistry and Physics Living Learning Community (CAPs LLC) aims to improve retention and success rates amongst intending and declared majors in both disciplines. The interdisciplinary nature of the CAPs LLC is designed to encourage cross disciplinary learning between physicists and chemists by providing a strong community of support within the structure of a much larger University.

All residents of the CAPs LLC will live together in the same residence hall allowing them to interact closely with other students who share similar goals and interests. Residents will also have the chance to participate in many engaging activities, interact with faculty in informal settings outside the classroom, and avail of a Resident Advisor familiar with their core classes. All activities are designed to further stimulate learning and build a close knit community.

Program Goals
The LLC strives to provide students with opportunities to interact with faculty and majors in their disciplines in inviting formal and informal environments. The LLC also aims to provide students with additional support to allow for an easier transition from high school into a large university.

All LLC participants will:

- Be block-enrolled into the same section of core classes
- Enroll in a COAD 1000 class specifically designed for LLC residents
- Obtain individualized attention from a faculty mentor
- Have access to a Resident Advisor who is familiar with their core classes

The LLC aspires for every student to be actively involved in all community events and to maintain a GPA of 3.0 or higher.
